

URL cPanel: <https://yodahieermias.com/CS20/HW1/hw1.html>

URL GitHub: <https://ermiayn3962.github.io/CS20/HW1/index.html>

Answers to Questions:

1. One thing I liked about GitHub Pages was just how easy it was to setup compared to cPanel hosting. I could easily look at my webpage without any hassle. On the other hand, what I enjoyed about cPanel hosting was just how much faster it was to update and view changes to the webpage. GitHub Pages took way too long to update any changes so I found myself using cPanel hosting more than GitHub.
2. The most satisfying part of this assignment was seeing all these accounts and pieces link together and display my webpage when I put in the URL.
